Experience

Penn Mutual

September 2024 – March 2025

Software Engineer

Philadelphia, PA

- Engineered scalable backend services for a high-availability financial pipeline handling 100k+ transactions, increasing data processing throughput by 60%.
- Architected cloud-native solutions on AWS, implementing automated CI/CD pipelines to streamline serverless workflows and significantly reduce infrastructure overhead.
- Optimized Spark-based compensation algorithms, reducing calculation runtimes by 40% and contributing to an 85% reduction in infrastructure costs.
- Collaborated with cross-functional teams to define API contracts, ensuring secure data integration and seamless communication across distributed backend services.

Comcast

September 2023 – March 2024

Machine Learning Engineer

Philadelphia, PA

- Deployed predictive machine learning models using Databricks and Apache Airflow for A/B testing environments to optimize content ranking algorithms and drive user engagement metrics.
- Automated the development lifecycle by building a Concourse CI/CD pipeline, reducing deployment times by over 50% and ensuring consistent release quality.
- Integrated cross-team REST APIs and AWS S3 storage solutions to unify data sources, enhancing the personalization engine's ability to serve relevant content to millions of users.
- Maintained production system health by monitoring live inference pipelines, rapidly diagnosing runtime errors to preserve 99.9% system uptime.

Comcast

September 2022 – March 2023

Software Engineer

Philadelphia, PA

- Developed a full-stack Django web application to visualize and configure network load balancers, significantly reducing infrastructure configuration time for operations teams.
- Designed RESTful API endpoints to decouple frontend and backend logic, improving data retrieval speeds by 30% and enhancing system maintainability.

Technical Skills

Programming Languages: Python, Java, Scala, C, JavaScript, TypeScript, SQL

Frameworks & Databases: React.js, Node.js, Express.js, PyTorch, Pandas, NumPy, Django, Flask, PostgreSQL, MongoDB

Tools & Platforms: AWS, Docker, Git, Databricks, Apache Airflow, Postman, Concourse, Jenkins, LLMs

Projects

SkyIDE | *React.js, Flask, AWS, Google Blockly*

- Developed a browser-based IDE for Philadelphia's 250th anniversary, architecting scalable AWS infrastructure to enable students to deploy games to a skyscraper via a custom block-to-Python transpiler.
- Integrated Google Blockly with a Flask backend to execute bi-directional code translation, allowing users to switch seamlessly between visual blocks and syntax-highlighted Python.

TensorPalette (Generative AI Engine) | *Python, PyTorch, Docker, Streamlit* | [Live Demo](#)

- Engineered a production-ready Fast Neural Style Transfer system, training a ResNet-based Transformer network on Google Colab (T4 GPU) to render artistic styles in under 1 second.
- Implemented a custom Teacher-Student training loop using a frozen VGG-16 for perceptual loss, utilizing instance normalization and reflection padding to eliminate visual artifacts.
- Deployed the inference engine as a containerized Docker microservice with a Streamlit frontend, featuring real-time style mixing and CPU-optimized image processing.

Education

Drexel University

Expected Graduation June 2026

Bachelor of Science in Computer Science (GPA: 3.50 / 4.00)

Philadelphia, PA

- Relevant Coursework:** Systems Programming, Systems Architecture, Software Architecture, Data Structures & Algorithms, Machine Learning, Artificial Intelligence, Reinforcement Learning, Probability & Statistics
